Dear Colleagues,

dentistry is an interdisciplinary field that combines the principles of medical and material sciences toward the development of therapeutic strategies. Continuous progress in the biomaterials field allows for the development of new studies and methods to treat and rehabilitate patients. The growth of pharmaceuticals and biomaterials as a research field has provided a novel set of therapeutic strategies for dental applications. Topics in this Special Issue include, but are not limited to, the following: new restorative materials, new regenerative materials, and translational research in all fields of dentistry.
