This Special Issue on "Clinical Advances in Head and Neck Imaging including Dentistry" offers a collection of articles showcasing the latest scientific progress in this field. Various topics are covered, including imaging developing teeth, procedure-related complications, technical evaluations and radiation protection. Moreover, the clinical value of contrast-enhanced ultrasounds is highlighted too, thus making an important contribution towards avoiding ionizing radiation-based imaging. As the Guest Editor of this Special Issue, I hope our readers will enjoy these papers in the field of head, neck and dental imaging.
