This reprint focuses on new paradigms of aquaculture to make this critical production sector more sustainable. Aquaculture can benefit from rearing low-trophic species and developing integrated multi-spatial, multi-niche, or multi-trophic aquaculture systems. In this reprint, experts share their experiences and insights on various methods to achieve this shift, which promotes a more sustainable, conservative, and restorative production process. Additionally, these approaches align aquaculture development with the circular economy model, helping to contribute to the Sustainable Development Goals outlined in Agenda 2030.
