We present a reprint of the Special Issue titled “Immune Mechanisms and Biomarkers in Systemic Lupus Erythematosus”. The Special Issue welcomed original works and review articles focusing on the cellular and molecular mechanisms underlying SLE in its different phases, with the goal of contributing novel knowledge of the pathogenesis of SLE and improved diagnostics, surveillance, prevention of long-term damage, and overall patient management. We also welcomed original works or review articles that evaluated immune components that could serve as diagnostic biomarkers, biomarkers of disease activity, or biomarkers of long-term outcomes.
