In the field of ocean engineering, a thorough understanding of the geotechnical characteristics of marine soils and the engineering characteristics of foundation systems and offshore structures is crucial for guiding design, construction, and maintenance operations. In order to enable colleagues to better understand the current research status in the field of ocean engineering and stimulate their scientific research interests and inspiration, we selected a total of 15 scientific research papers on marine engineering foundation treatment, offshore structure foundations, offshore structure inspection and maintenance, and marine resource exploration and included them in this Special Issue for colleagues to read and refer to.
