The Special Issue titled “Featured Papers in Mathematics and Finance” in the *Journal of Risk and Financial Management (JRFM)* presents a curated collection of high-quality research articles that advance the theoretical and applied aspects of financial mathematics. It includes pioneering works that explore diverse areas, such as option pricing, asset pricing models, financial risk management, and the interplay between real-world challenges and financial modeling. Notable contributions include innovative methods for implementing implied volatility in high-frequency markets, extensions of classical financial models using Bayesian approaches, and empirical analyses of fiscal consolidation and financial stability. This Special Issue also examines modern topics like the interconnectedness of cryptocurrencies, the impacts of COVID-19 on financial markets, and novel approaches to risk-adjusted portfolio optimization. By featuring studies that integrate cutting-edge mathematical techniques with critical financial applications, this Special Issue acts as a valuable resource for academics, practitioners, and policymakers. These articles highlight the ongoing evolution of mathematical finance, emphasizing its role in addressing contemporary challenges and improving decision-making processes in complex financial systems.
