This is a Special Issue on bone and soft tissue sarcomas. Despite advances in clinical and basic research, soft tissue and bone sarcomas remain clinically challenging. This Special Issue highlights the latest discoveries in soft tissue and bone cancers from the laboratory through to the clinics, bench to bedside, and beyond. It brings together original research and reviews covering bone and soft tissue sarcomas. The topics range from detection and diagnosis methods using histopathology, imaging, and molecular advances through to treatment and prognosis, including epidemiological studies, outcome analysis, and surgical and adjunct treatments. Sarcomas from human and veterinary patients as well as models are investigated.
