This is the Reprint of the Special Issue of *Processes* on “Fermentation and Bioprocess Engineering Processes”, contributing 11 interesting and high-quality papers in the broad field of research on fermentation and bioprocess engineering. This convergence of waste utilization and microbial synthesis demonstrates the potential for innovation in the field of biotechnology that promotes resource efficiency and environmental sustainability. Through optimized fermentation strategies and bioprocessing technologies, the aim is to facilitate the creation of value-added products, increase economic sustainability, and reduce our ecological footprint. Ongoing research and development in these areas holds the promise of transforming industries by increasing resilience in the face of global sustainability challenges.

MDPI Books offers quality open access book publishing to promote the exchange of ideas and knowledge in a globalized world. MDPI Books encompasses all the benefits of open access – high availability and visibility, as well as wide and rapid dissemination. With MDPI Books, you can complement the digital version of your work with a high quality printed counterpart.
