This is a reprint of the Special Issue titled "Advanced Materials for Oral Application (Volume 2)" from the journal *Materials* and consists of twenty-four original research articles, two review papers, and an editorial. It is focused on exploring the recent advances in the field of dental materials for prevention, direct and indirect restorations, endodontic use, and dental implants, as well as their properties and interactions with the oral environment. A scoping review on 3D bioprinting technologies, biomaterials, and cells used for dental applications is also included. The aim of this reprint is to inform the readers of the current challenges and future directions in the field of materials for oral application.
