This Special Issue presents ten original research articles that explore key challenges and innovative solutions in Additive Manufacturing (AM) for metallic applications. Addressed to professors, researchers, scientists, industrial engineers, and experts in metal AM, the Special Issue highlights how recent advancements contribute to improving the efficiency, quality, and sustainability of metal AM processes. By sharing new insights, experimental results, and modeling strategies, the contributors help set a forward-looking direction for both industrial and academic progress. This collection serves as a valuable resource for those seeking to advance both knowledge and practical applications in metallic Additive Manufacturing technologies.
