Memory Nanomaterials: Growth, Characterization and Device Fabrication

www.mdpi.com/books/reprint/11091

Edited by Chao Zhao Guilei Wang Huihui Li

ISBN 978-3-7258-4285-8 (Hardback) ISBN 978-3-7258-4286-5 (PDF)

This Special Issue is designed to guide readers through the forefront of 21st-century storage technologies. Beginning with the physical limits of traditional semiconductor technology, we concentrate on breakthrough principles, novel materials, and innovative structures— encompassing silicon heterostructures and nanostructures, advances in nanostructure processing and integration for DRAM, as well as emerging DRAM architectures. At the same time, the materials and device mechanisms of a variety of next-generation memories— including resistive RAM (RRAM), phase-change memory (PCM), magnetoresistive RAM (MRAM) and ferroelectric RAM (FRAM)—are explored. Topics such as reliability analysis and nanostructure characterization, materials computation and device simulation, logic-memory 3D integration, and innovative memory applications present studies from material growth and device fabrication to performance evaluation. We have invited leading experts in the field to share their insights and latest findings, collectively charting a blueprint for high-performance, energy-efficient, and highly scalable memory technologies that will drive the information age toward smarter, greener, and more efficient storage solutions.

MDPINBOOKS Publishing Open Access Books & Series

MDPI Books offers quality open access book publishing to promote the exchange of ideas and knowledge in a globalized world. MDPI Books encompasses all the benefits of open access – high availability and visibility, as well as wide and rapid dissemination. With MDPI Books, you can complement the digital version of your work with a high quality printed counterpart.

Open Access

Your scholarly work is accessible worldwide without any restrictions. All authors retain the copyright for their work distributed under the terms of the Creative Commons Attribution License.

Author Focus

Authors and editors profit from MDPI's over two decades of experience in open access publishing, our customized personal support throughout the entire publication process, and competitive processing charges as well as unique contributor discounts on book purchases.

High Quality & Rapid Publication

MDPI ensures a thorough review for all published items and provides a fast publication procedure. State-of-the-art research and time-sensitive topics are released with a minimum amount of delay.

ᆔ

High Visibility

Due to our global network and well-known channel partners, we ensure maximum visibility and broad dissemination. Title information of books is sent to international indexing databases and archives, such as the Directory of Open Access Books (DOAB), and the Verzeichnis Lieferbarer Bücher (VLB).

Print on Demand and Multiple Formats

MDPI Books are available for purchase and to read online at any time. Our print-on-demand service offers a sustainable, cost-effective and fast way to publish MDPI Books printed versions.
