This Reprint is a professional collection of research articles published in the Special Issue titled “Advances in Textile Structural Composites II”. It includes eight articles focused on fibre-reinforced composites and their allied applications. The mechanical analysis of such structures was an integral part of most of the articles. The recycling and reuse of textile waste into value-added composite products was significantly reported. A special focus was placed on the utilization of agro- and bio-based waste materials. Computational methods to analyze and predict the performance of the products was explained. The use of nanoscale fibers, as well as fillers in polymer composite materials, was explored in nonconventional application areas.
