This Special Issue Reprint presents a range of cutting-edge research advancements and scientific developments in metal powder-based additive manufacturing (AM), an ever-evolving field. The works presented here demonstrate significant progress in understanding microstructure–property relationships, process optimization, and novel alloy design. Focusing on the unique characteristics of metal AM techniques such as powder bed fusion and directed energy deposition, the Reprint highlights solutions for manufacturing complex geometries with tailored microstructures. Contributions systematically investigate the interplay between process parameters, thermal history, and resultant mechanical properties across diverse material systems. Key themes include the computational modeling of microstructural evolution, the experimental characterization of defect-formation mechanisms, and innovative approaches for multi-material processing. A particular emphasis is placed on developing high-performance alloys specifically engineered for AM process requirements, ranging from structural steels to advanced materials like high-entropy alloys and bulk metallic glasses. Several papers establish novel frameworks for predicting microstructure development during layer-wise fabrication, providing valuable tools for process parameter selection. By bridging fundamental materials science with practical engineering considerations, this Special Issue Reprint serves as both a reference compendium and catalyst for future innovation.

MDPI Books offers quality open access book publishing to promote the exchange of ideas and knowledge in a globalized world. MDPI Books encompasses all the benefits of open access – high availability and visibility, as well as wide and rapid dissemination. With MDPI Books, you can complement the digital version of your work with a high quality printed counterpart.

Open Access

Your scholarly work is accessible worldwide without any restrictions. All authors retain the copyright for their work distributed under the terms of the Creative Commons Attribution License.

Author Focus

Authors and editors profit from MDPI's over two decades of experience in open access publishing, our customized personal support throughout the entire publication process, and competitive processing charges as well as unique contributor discounts on book purchases.

High Quality & Rapid Publication

MDPI ensures a thorough review for all published items and provides a fast publication procedure. State-of-the-art research and time-sensitive topics are released with a minimum amount of delay.

High Visibility

Due to our global network and well-known channel partners, we ensure maximum visibility and broad dissemination. Title information of books is sent to international indexing databases and archives, such as the Directory of Open Access Books (DOAB), and the Verzeichnis Lieferbarer Bücher (VLB).

Print on Demand and Multiple Formats

MDPI Books are available for purchase and to read online at any time. Our print-on-demand service offers a sustainable, cost-effective and fast way to publish MDPI Books printed versions.
