This reprint brings together cutting-edge research and reviews that address the complex interactions between viruses and their hosts, providing new insights into the mechanisms of viral infection, host immune responses, and pathogen evasion strategies. The selected papers highlight recent innovations in diagnostic approaches, molecular pathogenesis, and antiviral therapeutics across a range of infectious diseases. From uncovering intracellular signaling events and viral replication strategies to exploring novel biomarkers and vaccine candidates, this collection serves as a timely resource for virologists, immunologists, and clinicians. Emphasizing both basic discoveries and translational applications, this volume reflects the dynamic advances in understanding and combating viral infections in the modern biomedical landscape.
