The present reprint includes the works published in the 1st edition of the Special Issue on “Advances in 3OM: Opto-Mechatronics, Opto-Mechanics, and Optical Metrology”, published in the journal *Photonics*. The 3OM concept was introduced in 2008 and combines these three complementary domains. The ten contributions to this Special Issue represent an enticing taste of the many areas of interest involving 3OM. Two of the works were prepared for the second edition of the International Conference “Advances in 3OM” (Timisoara, Romania, 2023). During the publishing process, the third edition of this conference was under development, and, linked to it, the second edition of this Special Issue of *Photonics* was launched.
