The Special Issue “Advances in Oral Diseases Diagnosis and Management: 2nd Edition”, published in *Diagnostics* (ISSN 2075-4418) under the section "Pathology and Molecular Diagnostics," presents a comprehensive collection of research advancing the diagnosis and management of oral diseases. Edited by Dr. Dimitris Tatsis and Dr. Konstantinos Paraskevopoulos from the Aristotle University of Thessaloniki, Greece, this issue addresses critical public health challenges posed by oral conditions, including oral potentially malignant disorders, oral cancer, autoimmune disorders, infections, temporomandibular joint disorders, osteomyelitis, and medication-related osteonecrosis of the jaws. Featuring 15 peer-reviewed papers, this Special Issue encompasses a wide spectrum of head and neck pathologies. Key contributions explore innovative diagnostic tools such as mucoscopy, bioimpedance, and optical coherence tomography, alongside histopathological and clinical analyses of conditions like oral lichen planus, leukoplakia, and peri-implantitis. The research highlights interdisciplinary approaches, integrating molecular biology, genetics, and microbiology, emphasizing early detection, personalized treatment, and patient-centered care to improve oral and systemic health outcomes.
