This Special Issue deals with the uncertainty of information in real-world problems and use cases. It is now well-known that fuzzy set theory is a suitable theory in this regard. This theory is a valuable conceptual tool for handling vague concepts and sets forth a unifying framework for modeling various types of information. The motivation and the goal of this Special Issue is to bring together researchers contributing to this exciting field of research and also inspire interested readers and researchers alike to develop effective tools to deal with imprecise and uncertain environments.
