Special Issue Reprint

Advances in Infant and Pediatric Feeding and Nutrition

Edited by: Jann Foster

This Reprint covers a broad spectrum of topics, ranging from the epigenetic effects of human milk on the ongoing neurodevelopment of infants and children, the impact of milk oligosaccharides, the effect of maternal fish consumption, and the use of bovine colostrum or infant formula from hydrolyzed whey protein to the validation of an instrument for evaluating parental feeding behaviors, breastfeeding, and childhood caries. The articles herein provide novel insights into the complex nature of infant feeding and nutrition and deepen our understanding of issues related to feeding and nutrition, paving the way for practical applications and future research.
