This Reprint explores the interactions between energy consumption and economic development, a topic that continues to attract the attention of both policymakers and academics. Advancing toward sustainable energy development requires a shared understanding of the causal relationships between energy use, economic performance, and environmental outcomes, an essential foundation for crafting effective environmental and growth policies. Recent methodological advancements in energy economics offer practical and impactful tools that support not only energy efficiency but also improvements in environmental performance. Accordingly, this Reprint presents policy-relevant research that examines the interconnections among energy, the environment, and the economy, with a particular focus on how energy consumption influences both economic viability and environmental sustainability. The findings contribute valuable insights and policy implications that support progress aligned with the principles of sustainable development.
