The Reprint of the Special Issue “Recent Advances on Catalytic Surfaces and Interfaces” aims to cover the recent advances in the fundamental understanding of surface and interface phenomena in catalysis. It consists of nine high-quality papers on various aspects of catalysis, related to the rational design and fine-tuning strategies during some of the most relevant applications in electro-, photo-, and thermo-catalysis, such as green diesel production, hydrocracking, hydrogen and oxygen evolution reactions, and wastewater treatment, among others.
