Edited by Chandra Giri

ISBN 978-3-7258-5219-2 (Hardback) ISBN 978-3-7258-5220-8 (PDF)

This comprehensive volume explores the cutting-edge applications of remote sensing technologies in monitoring and understanding climate change. Featuring contributions from leading experts, the Reprint delves into innovative methodologies that leverage satellite data, aerial imagery, and ground-based sensors to track environmental changes on a global scale. Readers will gain insights into the latest advancements in data analysis, climate modeling, and predictive tools that are transforming how scientists study atmospheric phenomena, land cover transformations, and oceanic shifts. Essential for researchers, policymakers, and environmentalists, this Reprint underscores the critical role of remote sensing in addressing the pressing challenges posed by climate change, offering practical solutions and strategies for sustainable development.
