Renewable energy systems play a major role in the solution to global problems such as the energy crisis and climate change. The need for better and more efficient renewable energy systems requires state-of-the-art techniques and tools for their design and analysis. Computational Fluid Dynamics (CFD) is one of the tools that have become a standard in the design process of thermal fluid systems. This reprint of this Special Issue is focused on the application of CFD to the design, analysis, and optimisation of renewable energy systems.
