In recent years, the dental landscape has witnessed a dynamic transformation driven by digital technology and the rapid evolution of the dental industry. This transformation has given rise to the development and introduction of new materials across various dental disciplines, including prosthesis, restorative dentistry, endodontics, implantology, and orthodontics. Regrettably, this surge in productivity has not always been paralleled by robust scientific research, resulting in clinicians encountering materials that may not necessarily outperform their predecessors. Consequently, there is a pressing need for further studies to establish substantial evidence for the efficacy of recently introduced dental materials.

Under this backdrop, this reprint includes high-quality research articles, clinical studies, review articles, and case reports that delve into the latest advances and prospects of dental materials, spanning all fields of dentistry.
