Biodegradable metals, such as magnesium, zinc, and iron, show significant promise for biomedical implants and specialized industrial applications due to their unique biodegradable characteristics. This reprint focuses on novel alloy design, thermomechanical processing, as well as microstructural, mechanical, and corrosion characterization, alongside in vitro degradation/cytocompatibility assessment. This reprint illustrates the remarkable progress in biobased and degradable Mg, Zn, and Fe alloys, providing critical insights to overcome current limitations and guide future development of these revolutionary materials.
