Cancer is a prevalent disease worldwide and is becoming worse over time. Although some advanced, effective cancer therapies have been developed, there are limitations in current treatments, including severe side effects for patients, tumor recurrence and metastasis, and the development of drug resistance. Therefore, identifying novel cancer-specific targets and developing more effective, less toxic therapeutics is of urgent clinical significance to improve the survival rate of cancer patients.

Bioactive molecules play an important role in regulating the processes of cancer cell growth and development. The bioactive molecules of interest in this Reprint include small chemical molecules from nature and biomolecules found in living organisms, as well as their synthetic family members. It is well known that many clinically used drugs are developed from plants; many nutrient molecules from functional foods have cancer-preventive and antitumor activities; and many biomolecules (such as proteins and nucleic acids) are anticancer drug targets or have tumor-suppressing activities. All of these findings have been or could be used to develop new strategies for preventing and treating various cancers.

MDPI Books offers quality open access book publishing to promote the exchange of ideas and knowledge in a globalized world. MDPI Books encompasses all the benefits of open access – high availability and visibility, as well as wide and rapid dissemination. With MDPI Books, you can complement the digital version of your work with a high quality printed counterpart.

Open Access

Your scholarly work is accessible worldwide without any restrictions. All authors retain the copyright for their work distributed under the terms of the Creative Commons Attribution License.

Author Focus

Authors and editors profit from MDPI's over two decades of experience in open access publishing, our customized personal support throughout the entire publication process, and competitive processing charges as well as unique contributor discounts on book purchases.

High Quality & Rapid Publication

MDPI ensures a thorough review for all published items and provides a fast publication procedure. State-of-the-art research and time-sensitive topics are released with a minimum amount of delay.

High Visibility

Due to our global network and well-known channel partners, we ensure maximum visibility and broad dissemination. Title information of books is sent to international indexing databases and archives, such as the Directory of Open Access Books (DOAB), and the Verzeichnis Lieferbarer Bücher (VLB).

Print on Demand and Multiple Formats

MDPI Books are available for purchase and to read online at any time. Our print-on-demand service offers a sustainable, cost-effective and fast way to publish MDPI Books printed versions.
