## Perspectives in Veterinary Toxicology and Pharmacology

**Edited by: Maria Vittoria Varoni , Elena Baralla and Valeria Pasciu**

This Reprint aims to bring together high-quality research on the emerging disciplines of veterinary pharmacology and toxicology, which are closely related to other subjects like physiology. This Reprint encompasses the following aspects: the toxic effects of emerging contaminants and their industrial applications, demonstrated on different animal models; the use of natural compounds and dietary supplementation to support the function of an organism after exposure to emerging contaminants; environmental contamination; toxicological risks related to the consumption of contaminated food; and evaluations of the effects of new treatments. These aspects are all related to the One Health approach, which aims to optimize the health of people, animals, and the ecosystem.
