Advanced Therapy in Companion Animals

Edited by: Zhijun Zhong and Ziyao Zhou

Following the success of the first edition, the second edition of the Reprint “Advanced Therapy in Companion Animals” continues to showcase significant advances in veterinary medicine, with a particular focus on innovative therapeutic strategies aimed at improving the health, welfare, and quality of life of companion animals. This Reprint brings together high-quality contributions addressing emerging approaches such as regenerative medicine, gene therapy, immunotherapy, and precision medicine, reflecting the rapid evolution of treatment options for both chronic and acute conditions in small animal practice. Building on the momentum established previously, the articles included in this Reprint highlight notable progress in diagnostic techniques, personalized treatment strategies, and minimally invasive and image-guided procedures. Special attention is given to the integration of advanced technologies and interdisciplinary perspectives, emphasizing collaboration among veterinarians, researchers, and biotechnologists as a driving force for innovation in companion animal therapy. Through original research articles, clinical studies, case-based analyses, and comprehensive reviews, this Reprint provides a valuable overview of state-of-the-art therapeutic developments and their practical implications. Collectively, the contributions offer an informative resource for veterinary professionals and researchers seeking to remain at the forefront of advanced therapeutic approaches in companion animal medicine.
