Special Issue Reprint

Commemorating the Launch of the Section "Marine Toxins"

Edited by: Andrew Turner and Panagiota Katikou

This Special Issue Reprint is a published collection of articles which together celebrate the multi-disciplinary work conducted in the field of marine biotoxins. These toxins are produced naturally by many different species of microalgae, macroalgae, and bacteria. This Reprint includes work focusing on venoms produced by marine organisms, as well as topics of high relevance to the ongoing state of knowledge relating to the detection of marine toxins and venoms, production mechanisms, impacts of toxins on aquatic organisms, detection of new hazards, detection methodology refinements, toxicology, and an overall review of marine toxins in terms of occurrence and public health. This Reprint is a resource for all researchers interested in keeping up to date with developments in this field of aquatic science.
