Special Issue Reprint

Anterior Cruciate Ligament (ACL) Injuries

Edited by: Young-Jin Seo

The following Reprint presents a comprehensive collection of articles from the Special Issue on anterior cruciate ligament injuries, with a focus on contemporary clinical treatment and rehabilitation strategies. It highlights recent advances in surgical techniques, including graft selection and lateral extra-articular procedures, in addition to postoperative outcomes and functional recovery. Emphasis is placed on evidence-based approaches to enhance joint stability, minimize complications, and facilitate return to sports and daily activities. In addition, this Reprint addresses rehabilitation protocols and biological considerations that influence long-term joint health. By integrating clinical insights with current research, this Reprint provides valuable perspectives for orthopedic surgeons, sports medicine specialists, and researchers involved in the management of ACL injuries.
