Mechatronic Systems

Edited by: Nicola Ivan Giannoccaro, Ramiro Velázquez and Gianfranco Parlangeli Parlangeli

In today's industrial world and applied scientific research, it is crucial to continuously update ourselves on the applications and developments of mechatronic systems, in which increasingly technologically complex electronic and sensory devices allow us to manage machinery, devices, or parts of them in increasingly surprising ways. For this reason, in this Special Issue, some interesting developments of mechatronic systems are proposed with the aim of stimulating the reader's interest and updating them on recent applications.
