Special Issue Reprint

Marine Geotechnical Engineering and Marine Civil Engineering Construction

Edited by: Jun Hu, Guan Chen and Yong Fu

This Reprint compiles the contributions published in the Special Issue titled "Marine Geotechnical Engineering and Marine Civil Engineering Construction". It highlights recent advances in marine geotechnical engineering, offshore and coastal infrastructure, soil mechanics, soil-structure interaction, offshore foundations, structural health monitoring, geotechnical reliability, and sustainable construction in marine environments. The Reprint presents both theoretical developments and practical engineering applications, reflecting current efforts to improve the safety, resilience, and sustainability of marine civil engineering projects. It serves as a valuable reference for researchers, engineers, practitioners, and graduate students working in offshore engineering, coastal development, and marine infrastructure.
