The Impact of Social Media on Public Health and Education

Edited by: Keren Dopelt

This Reprint brings together a collection of contemporary studies examining how social media shapes public health and educational outcomes in the digital era. As online platforms increasingly influence how individuals access, interpret, and act upon information, their role in shaping health behaviors and learning processes has become a critical area of inquiry.

The articles included in this Reprint address the mechanisms through which social media affects health-related decision making, with a particular focus on the spread of health information and misinformation, and their implications for behaviors, perceptions, and well-being. Contributions also explore the psychological and social dimensions of digital engagement, including its impact on mental health, body image, and lifestyle behaviors.
