Molecular Magnetism

Edited by: Peng Cheng, You Song, Huizhong Kou and Jinkui Tang

The present Special Issue is dedicated to Professor Dai-Zheng Liao on the occasion of his 85th birthday in 2024. Professor Liao was a pioneer in the development of molecular magnetism research in China since the late 1980s, making significant contributions to spin crossover complexes, irregular spin state structures, magnetic ordering, radical complexes, and single-molecule magnets. This Special Issue includes an Editorial, one review article, and fourteen original research articles from leading researchers in molecular magnetism in China, all of whom pay tribute to Professor Liao's mentorship and legacy.
