Anticancer Activities of Dietary Phytochemicals

Edited by: Ching-Hsein Chen and Yi-Wen Liu

This Reprint, entitled “Anticancer Activities of Dietary Phytochemicals: 2nd Edition”, presents recent advances in understanding of dietary phytochemicals and their anticancer activities. The articles included in this Reprint cover multiple aspects of cancer research, including apoptosis, oxidative stress, metastasis, inflammation, signaling pathways, and combination therapies involving natural compounds and conventional anticancer agents. In addition to mechanistic studies, several articles also discuss the therapeutic potential of phytochemicals in cancer prevention and treatment. Collectively, this Reprint provides updated insights into the biological functions and translational applications of dietary phytochemicals in cancer therapy and prevention, and it will serve as a useful reference for researchers, clinicians, and students in related fields.
