Radar Target Detection, Imaging and Recognition

Edited by: Tianxian Zhang, Xueting Li and Yuanhang Wang

The radar, which can sense the target and environment at any time and in any weather, is a kind of sensor which plays an important role in a wide range of applications, such as target detection, imaging and recognition. With advances in radar hardware and software technologies, more flexible radar working modes with more potential have been explored, together with new theories and methods for advanced radar detection, imaging and recognition. Nowadays, radar detection, imaging and recognition have become an international front and hotspot in the field of sensor research.
