Advances in Phenolic Based Complexes

Edited by: Kiril B. Gavazov

This Reprint of a Special Issue presents recent advances in the chemistry and applications of phenolic-based complexes. The included papers cover five thematic areas: (i) synthesis and structural characterization; (ii) biological activity and therapeutic potential; (iii) analytical applications and sensors; (iv) nanotechnology and advanced delivery systems; and (v) metabolism and environmental factors. Collectively, the contributions provide an up-to-date overview of the field, highlighting emerging trends, innovative approaches, and future research directions, while demonstrating the broad scientific and technological potential of this rapidly evolving research area.
