Bioinformatics Applications Based On Machine Learning

Edited by: Pablo Chamoso , Sara Rodriguez , Mohd Mohamad and Alfonso González-Briones

The great advances in information technology (IT) have implications for many sectors, such as bioinformatics, and has considerably increased their possibilities. This book presents a collection of 11 original research papers, all of them related to the application of IT-related techniques within the bioinformatics sector: from new applications created from the adaptation and application of existing techniques to the creation of new methodologies to solve existing problems.
