Over the last few decades, an increasing amount of interest from academia and industry has been devoted to the application of the 12 Principles of the green chemistry in order to pursue the Sustainable Development Goals (SDG). They are based on the fundamental idea of guiding research and innovation toward more environmentally-friendly practices and solutions. This book, entitled Sustainable and Environmental Catalysis, collects original research papers, reviews, short communications, and commentaries reflecting the state-of-the-art and future applications in this field, with particular emphasis on the adoption of green chemistry principles at both a laboratory and industrial scale.
