The aim of this Special Issue is to present the latest achievements related to the manufacturing and processing of titanium alloys and titanium-based composites. The subjects of published research articles concern deformation behavior, development of microstructure and properties and special applications of titanium-based materials. The Special Issue contains 21 articles—1 editorial, 18 research articles, 1 review and 1 technical note, written by the authors representing scientific institutions from 13 countries. It provides a wide overview of recent research developments on different aspects of titanium-based materials, which should be useful for researchers and engineers working in this field.
