Asthma is a multifaceted and puzzling disease. In the present book, well-known scholars offer their expert opinions and revise aspects of our current knowledge of this disease. Using new data (available in the upcoming Global Asthma Network study) on the epidemiology of asthma to explore the everlasting ‘chicken-or-egg’ conundrum, the authors present clear information on topics such as new biological treatments, new approaches to inhalation combination therapy or sublingual immunotherapy, and present an in-depth exploration of old and new risk factors related to the novel epidemics of non-communicable diseases such as obesity. Regarding the ‘chicken-or-egg’ conundrum, the book offers some information on asthma inception and how this could relate to early lung development. Both editors are grateful for the time and effort that the authors have put into this project, and hope that this book will help healthcare providers to gain a better understanding of this complex disease.
