This Special Issue focuses on the influence of fitness and physical activity and the effects of exercise interventions on human health- and disease-related outcomes. This includes, but is not restricted to, the following article types:

- Observational studies assessing the association of physical fitness (alone or in combination with other risks/protective factors) with health- and disease-related outcomes.
- Observational studies assessing the association of physical activity (alone or in combination with other lifestyle behaviors) with health- and disease-related outcomes. *This includes studies assessing physical activity through either objective or subjective means.*
- Experimental studies assessing the effects of exercise interventions (alone or in combination with other interventions) on health- and disease-related outcomes across the lifespan.
- Systematic reviews and meta-analyses on the above-mentioned topics are also welcome.
