Monoclonal Antibody-Directed Therapy

Edited by: Veysel Kayser and Amita Datta-Mannan

The book deals with therapeutic monoclonal antibodies (mAbs) broadly, and relevant topics such as challenges and opportunities, next-generation antibody products, Antibody-Drug-Conjugates (ADC), bispecifics, glycosylation, and T-cell engagers are covered. Each topic has been written by leading groups around the world and the book should be of interest to researchers from both academia and industry.
