This reprint focuses on how wellness can be achieved in terms of public health environment and community care in the workplace and in information technology. Psychological health is often used interchangeably with mental health care and is mainly considered stress management. We believe in intelligent care for public wellness because our nursing and public health are integrated with information technologies to support public health wellness. Such integration can help public health promotion. Information technology could improve the overall quality of life by promoting workers' wellness and satisfaction. This book highlights issues on wellness in public health and community care by emphasizing psychological and physical health promotion perspectives.
