Due to the great success of our Special Issue "Brain Stimulation and Neuroplasticity", we decided to set up a second volume. A large number of qualified submissions confirmed the importance of non-invasive brain stimulation methods in recent years and showed a broad field of applications.

Again, this second volume of the Special Issue aims to gather pre-clinical and clinical data on brain stimulation techniques (electrical and magnetic stimulation methods).

This Special Issue compiles latest research on the clinical and neurophysiological application of brain stimulation methods and the impact of brain stimulation on imaging outcomes, neurobiological markers, and clinical variables (including neurological, affective, and cognitive measures).
