This publication summarizes the proceedings of the 15th International Conference on Hand-Arm Vibration, held on 6–9 June 2023 in Nancy, France. This multidisciplinary conference was organized by the INRS (National Research and Safety Institute, France) under the patronage of the International Advisory Committee on Hand-Arm Vibration. It brought together experts from many different backgrounds to present and discuss their most recent work on hand-arm vibration. This conference aimed to develop a better understanding of the health risks resulting from vibration exposure in order to improve risk control measures. This event was intended for scientists, occupational physicians, epidemiologists, machine manufacturers, metrologists, health and safety practitioners, standardization groups, and government agencies.
