This edited volume, “Research on Corporate Sustainability”, contains reports written by experts in their areas of specialization. The volume begins by introducing a report on the interim system theory of corporate sustainability, which fills in the gap in the predominantly empirical field of corporate sustainability, and is followed by three reports on organizational resilience that are widely regarded as sustainability outcomes. Another set of reports is concerned with sustainable tourism and community development, as sustainable community development can often be sustained by the people who live there. Finally, the edited volume concludes with two reports on sustainable supply chain management and climate finance, which are seen as critical aspects of sustainable development.
