Today, more than ever, the world needs to be considered a finite and limited system, characterised by scarce resources and as a place where restocking is not possible in an infinite way. As such, careful resource management needs to be planned and set by the concurrent actions of heterogeneous stakeholders, from policymakers up to academics and practitioners, to effectively implement the Circular Economy. This reprint highlights new opportunities and challenges for the Circular Economy and Sustainable Business Performance Management, focusing on technological advancements and management initiatives, including public-private partnerships between stakeholders.
