With the continuous improvement of people's living standards, the concern for food nutrition and safety has gradually increased. Consumers increasingly need to replace synthetic food additives with natural components extracted from food. Polysaccharides, starch, protein, pectin, and fibre are major types of biopolymer components in foods. They not only provide people with energy and nutrition, but are also used in food processing as natural additives due to their gelling, emulsifying, and film-forming properties, etc. They are characterised by high biocompatibility, low cost, and ease of access. Some natural components isolated from raw food materials have some drawbacks, such as low solubility and instability under certain conditions, which limit their application in food processing. Currently, many researchers are focusing on the modification, food technology, and future industry of polysaccharides, starch, protein, etc. These studies help to obtain the changed physicochemical and enhanced functional properties of these components, and further promote their high-value utilization in the food field. This Special Issue brings together 34 articles regarding the latest advances in the properties of polysaccharides, starch, protein, pectin, and fibre in food processing, from the improvements of the physical properties of major food components and biological activity studies to their applications in food preservation.

MDPI Books offers quality open access book publishing to promote the exchange of ideas and knowledge in a globalized world. MDPI Books encompasses all the benefits of open access – high availability and visibility, as well as wide and rapid dissemination. With MDPI Books, you can complement the digital version of your work with a high quality printed counterpart.

## Open Access

Your scholarly work is accessible worldwide without any restrictions. All authors retain the copyright for their work distributed under the terms of the Creative Commons Attribution License.

## Author Focus

Authors and editors profit from MDPI's over two decades of experience in open access publishing, our customized personal support throughout the entire publication process, and competitive processing charges as well as unique contributor discounts on book purchases.

## High Quality & Rapid Publication

MDPI ensures a thorough review for all published items and provides a fast publication procedure. State-of-the-art research and time-sensitive topics are released with a minimum amount of delay.

## High Visibility

Due to our global network and well-known channel partners, we ensure maximum visibility and broad dissemination. Title information of books is sent to international indexing databases and archives, such as the Directory of Open Access Books (DOAB), and the Verzeichnis Lieferbarer Bücher (VLB).

## Print on Demand and Multiple Formats

MDPI Books are available for purchase and to read online at any time. Our print-on-demand service offers a sustainable, cost-effective and fast way to publish MDPI Books printed versions.
