2021 Feature Papers by Diversity's Editorial Board Members

Edited by: Michael Wink

The journal "*Diversity*" has a competent and ambitious international Editorial Board. A number of the EB members published their research in a Special Issue in 2021. About 52 publications on biodiversity, ecology and evolution are organized in this Special Issue.

The publications cover a broad range of several timely aspects of biodiversity, such as invasive species; biodiversity management; floristics; Citizen Science; the influence of human activities on plant, insect, mammal, bird, reptile and amphibia populations; parasites; genetic diversity and DNA barcoding; as well as microbiome, genome and transcriptome studies. Additionally, taxonomic and biosystematic topics, with the description of new species, including a new species of dinosaur, are covered in several of the SI publications.
