The reprint "Breast Cancer: A Multi-Disciplinary Approach from Imaging to Therapy" provides a thorough examination of breast cancer management, bridging knowledge gaps and delving into the emotional aspects of diagnosis and treatment. In today's challenging times, a comprehensive approach is essential to maintain a high standard of care. Breast cancer's impact extends beyond individuals, affecting entire communities through social, economic, and psychological consequences. To address these challenges, a multidisciplinary strategy is crucial, integrating human resources and cutting-edge technology for early detection and more effective treatments.

This publication features eleven articles covering various topics from early diagnosis to targeted therapies. Firstly, the authors explore the use of magnetic resonance imaging and emerging techniques, assessing their role in the preoperative stage. Then, the implications of radiotherapy and the significance of surgery, especially for specific breast cancer types and high-risk patients, are evaluated. Additionally, the reprint delves into the psychological effects of genetic predisposition, diagnosis, and treatment, considering their impact on social and familial behaviors. These interdisciplinary discussions highlight the need for a holistic understanding of breast cancer, emphasizing collaborative efforts to advance knowledge and enhance patient outcomes.
